Modern Home Blinds

The definitive guide to modern window architecture, smart automation, and properly finished interiors.

About Us

THE MODERN HOME REQUIRES A MODERN FINISH

Standard, off-the-shelf window dressings often leave spaces feeling unresolved. Today's modern interiors demand more than just basic shading—they require intelligent, architectural solutions that actively improve how a room functions and feels

Modern home blinds are engineered to bypass bulky hardware and messy cords, offering sleek, built-in appearances that integrate flawlessly with your windows

In this edition, we explore the cutting edge of bespoke window architecture: from systems that actively insulate your home to completely wire-free smart home automation

Quiet luxury lives here. Let us help you find the exact specification for your space

PERFECT BLINDS UK

ADVANCED THERMAL & ACOUSTIC ENGINEERING

– HONEYCELL ABSOLUTE BLINDS

Windows are the biggest source of heat loss in a typical home, but the Honeycell® Absolute system is engineered to change that

Smart home integration.

Connect your motorised Honeycell blinds to Apple Home, Alexa or Google Assistant. Set them to close when the sun gets too strong, or open gradually with your morning alarm. It is genuinely useful, especially for hard-to-reach windows. We also offer the latest Matter over Thread motorised options. This is the future of smart blinds: faster, more reliable, and ready to connect directly to your favorite smart home app the moment they're installed.

- Noise Reduction:

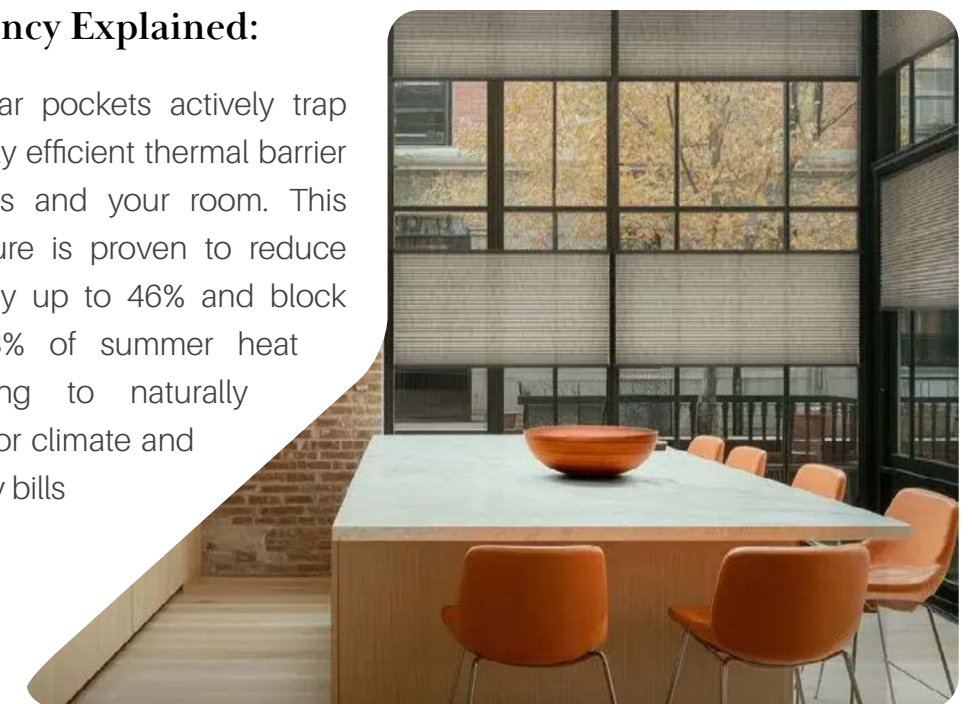

Beyond temperature control, the deep honeycomb structure acts as a natural sound buffer, softening external noise to keep your living space feeling private and peaceful

- Top-Down, Bottom-Up (TDBU):

For the ultimate in everyday flexibility, deploy TDBU operation to flood your room with natural light from above while maintaining complete privacy at eye level

- Energy Efficiency Explained:

The unique cellular pockets actively trap air, creating a highly efficient thermal barrier between the glass and your room. This engineered structure is proven to reduce winter heat loss by up to 46% and block an impressive 78% of summer heat absorption, helping to naturally regulate your indoor climate and reduce your energy bills

PROPER DARKNESS

– BLOCKOUT BLINDS

You don't realise how much light affects your rest until you experience true darkness. For light sleepers, night shift workers, or dedicated home cinema rooms, regular fabrics simply aren't enough. We engineer absolute darkness using specialist systems

- Pleated Perfect Fit Frames BO: - The Benthin Block-Out Roller:

neat, drill-free blackout solution. The frame clips seamlessly onto your uPVC window, keeping the blackout fabric perfectly flush against the glass. The fabric moves with the window when you open it, ensuring an unobtrusive, architectural finish

This system utilises sleek aluminium side channels to completely seal the fabric edges, eliminating frustrating light leaks and guaranteeing proper darkness when you need it

- BlindScreen® / FlyScreen

Want to enjoy fresh air without uninvited guests like flies, wasps, and midges entering your home? BlindScreen offers the perfect solution, combining two functions in one innovative product.

Choose a blackout fabric to create a thermal blind that helps retain warmth and block out light, or opt for a light-filtering fabric to provide privacy while still allowing natural light into your space.

Both fabric options can be positioned on either side, giving you complete flexibility to suit your preferences.

The system is completed with an integrated flyscreen mesh, available as either a single pleat or a stylish honeycomb voile. This allows fresh air to circulate freely through your home on warm days, while keeping nature's little visitors firmly outside.

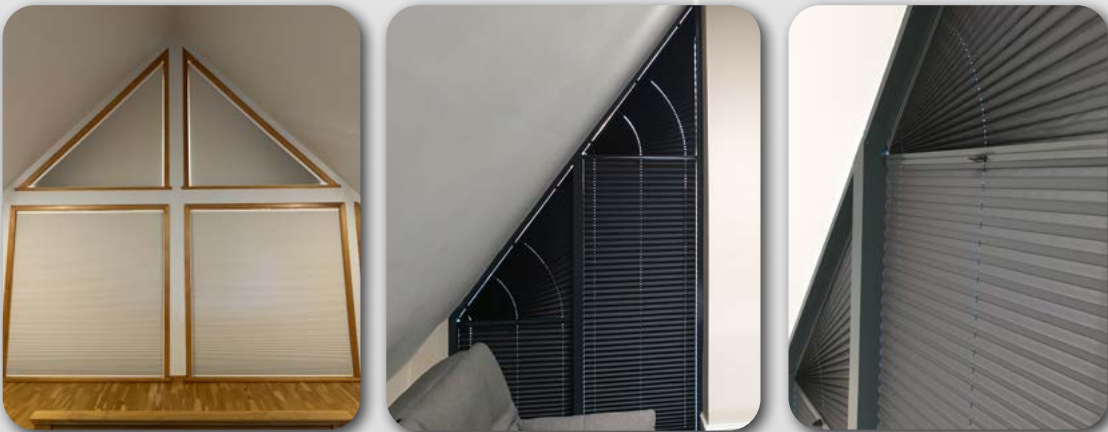

ARCHITECTURAL & SPECIALIST SHAPES

– SHAPE BLINDS

Modern architecture often features stunning expansive glazing, but these unique shapes can be notoriously difficult to dress. Standard blinds fail to navigate complex angles, leaving messy gaps. Our custom-crafted specialist pleated systems are designed to fit your exact measurements flawlessly

- ApexShade™ (Gable Ends & Triangles):

Custom-made specifically to navigate the difficult angles of triangular apex and gable end windows found in loft conversions and modern builds

- LanternShade™:

A tensioned pleated system built specifically to prevent sagging on flat or angled lantern roofs, taming intense overhead sun and glare without masking the architectural beauty of the glass

SEAMLESS INTEGRATION

– STICK-ON & DRILL-FREE SOLUTIONS

When drilling into your premium window frames is off the table, we provide flawlessly integrated alternatives that protect your warranties and your deposit

- CelluShade™ Stick-On:

Designed specifically for modern aluminium bi-fold doors and windows with square beading. Instead of screws, this precision-engineered system mounts using high-strength adhesive side channels, creating a clean, flush finish that moves seamlessly with your doors

- Perfect Fit Frames:

Slim aluminium frames that clip directly under the rubber beading of uPVC windows in minutes. The blind sits inside its own frame, creating a built-in appearance with zero damage to the surrounding structure

THE FUTURE OF LIVING

– SMART HOME CONNECTIONS & MOTORISATION

Manual operation is rapidly becoming obsolete. Advanced motorisation is the ultimate everyday luxury, completely transforming how you interact with natural light and privacy

- Effortless Smart Control:

We integrate industry-leading hardware from Somfy, Thorq, Dooya, and Coulisse Motionblinds. By deploying the latest Matter over Thread technology, your blinds connect instantly to Apple HomeKit, Amazon Alexa, and Google Assistant

- 100% Child-Safe by Design:

Because motorised systems eliminate the need for dangling operating cords and chains entirely, they are inherently the safest window dressing option available for homes with young children and pets

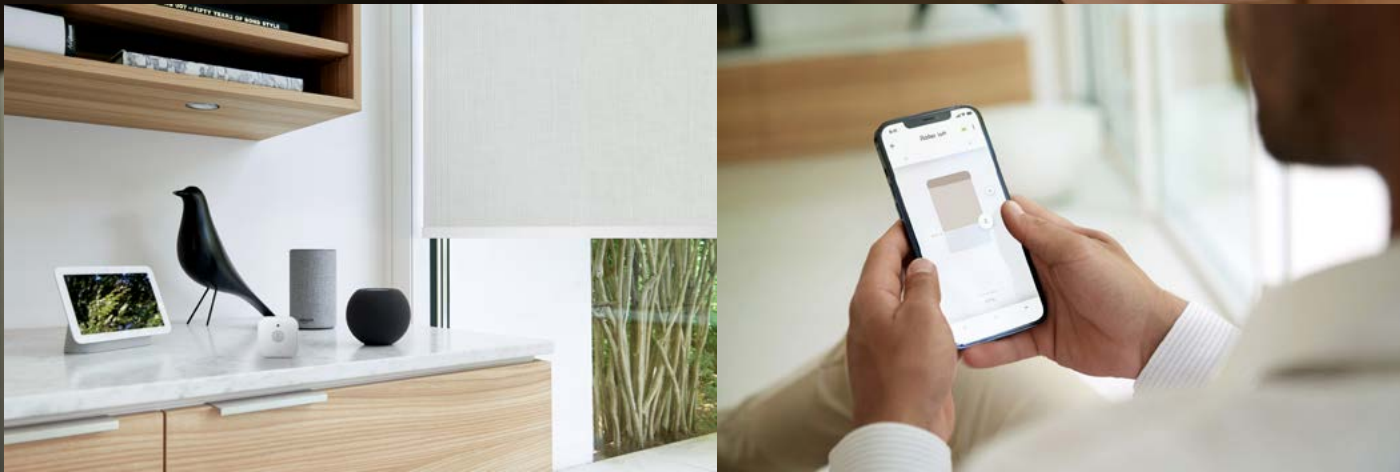

- Schedules & Automation:

Transform your environment completely hands-free. Set your blinds to open automatically with your morning alarm, or use sun and temperature sensors to drop the blinds the moment your room gets too warm

- Flexible Power:

Choose from wire-free, USB rechargeable battery motors that last months on a single charge, hardwired mains solutions, or zero-maintenance solar-powered motors for hard-to-reach skylights

“ FANTASTIC!
Fantastic products and amazing service!
Highest quality and will tend to your every need no other blind company in South Yorkshire can offer anything near to this level of craftsmanship. Thank you, Will be buying more . . .
~ Andrew, South Yorkshire ”

THE ARCHITECTURAL CLASSIC

– PLANTATION & URBAN SHUTTERS

Shutters are the ultimate investment in your property, acting as a permanent architectural feature rather than a simple window covering. They provide a clean, streamlined finish that makes any space feel instantly more intentional and put together

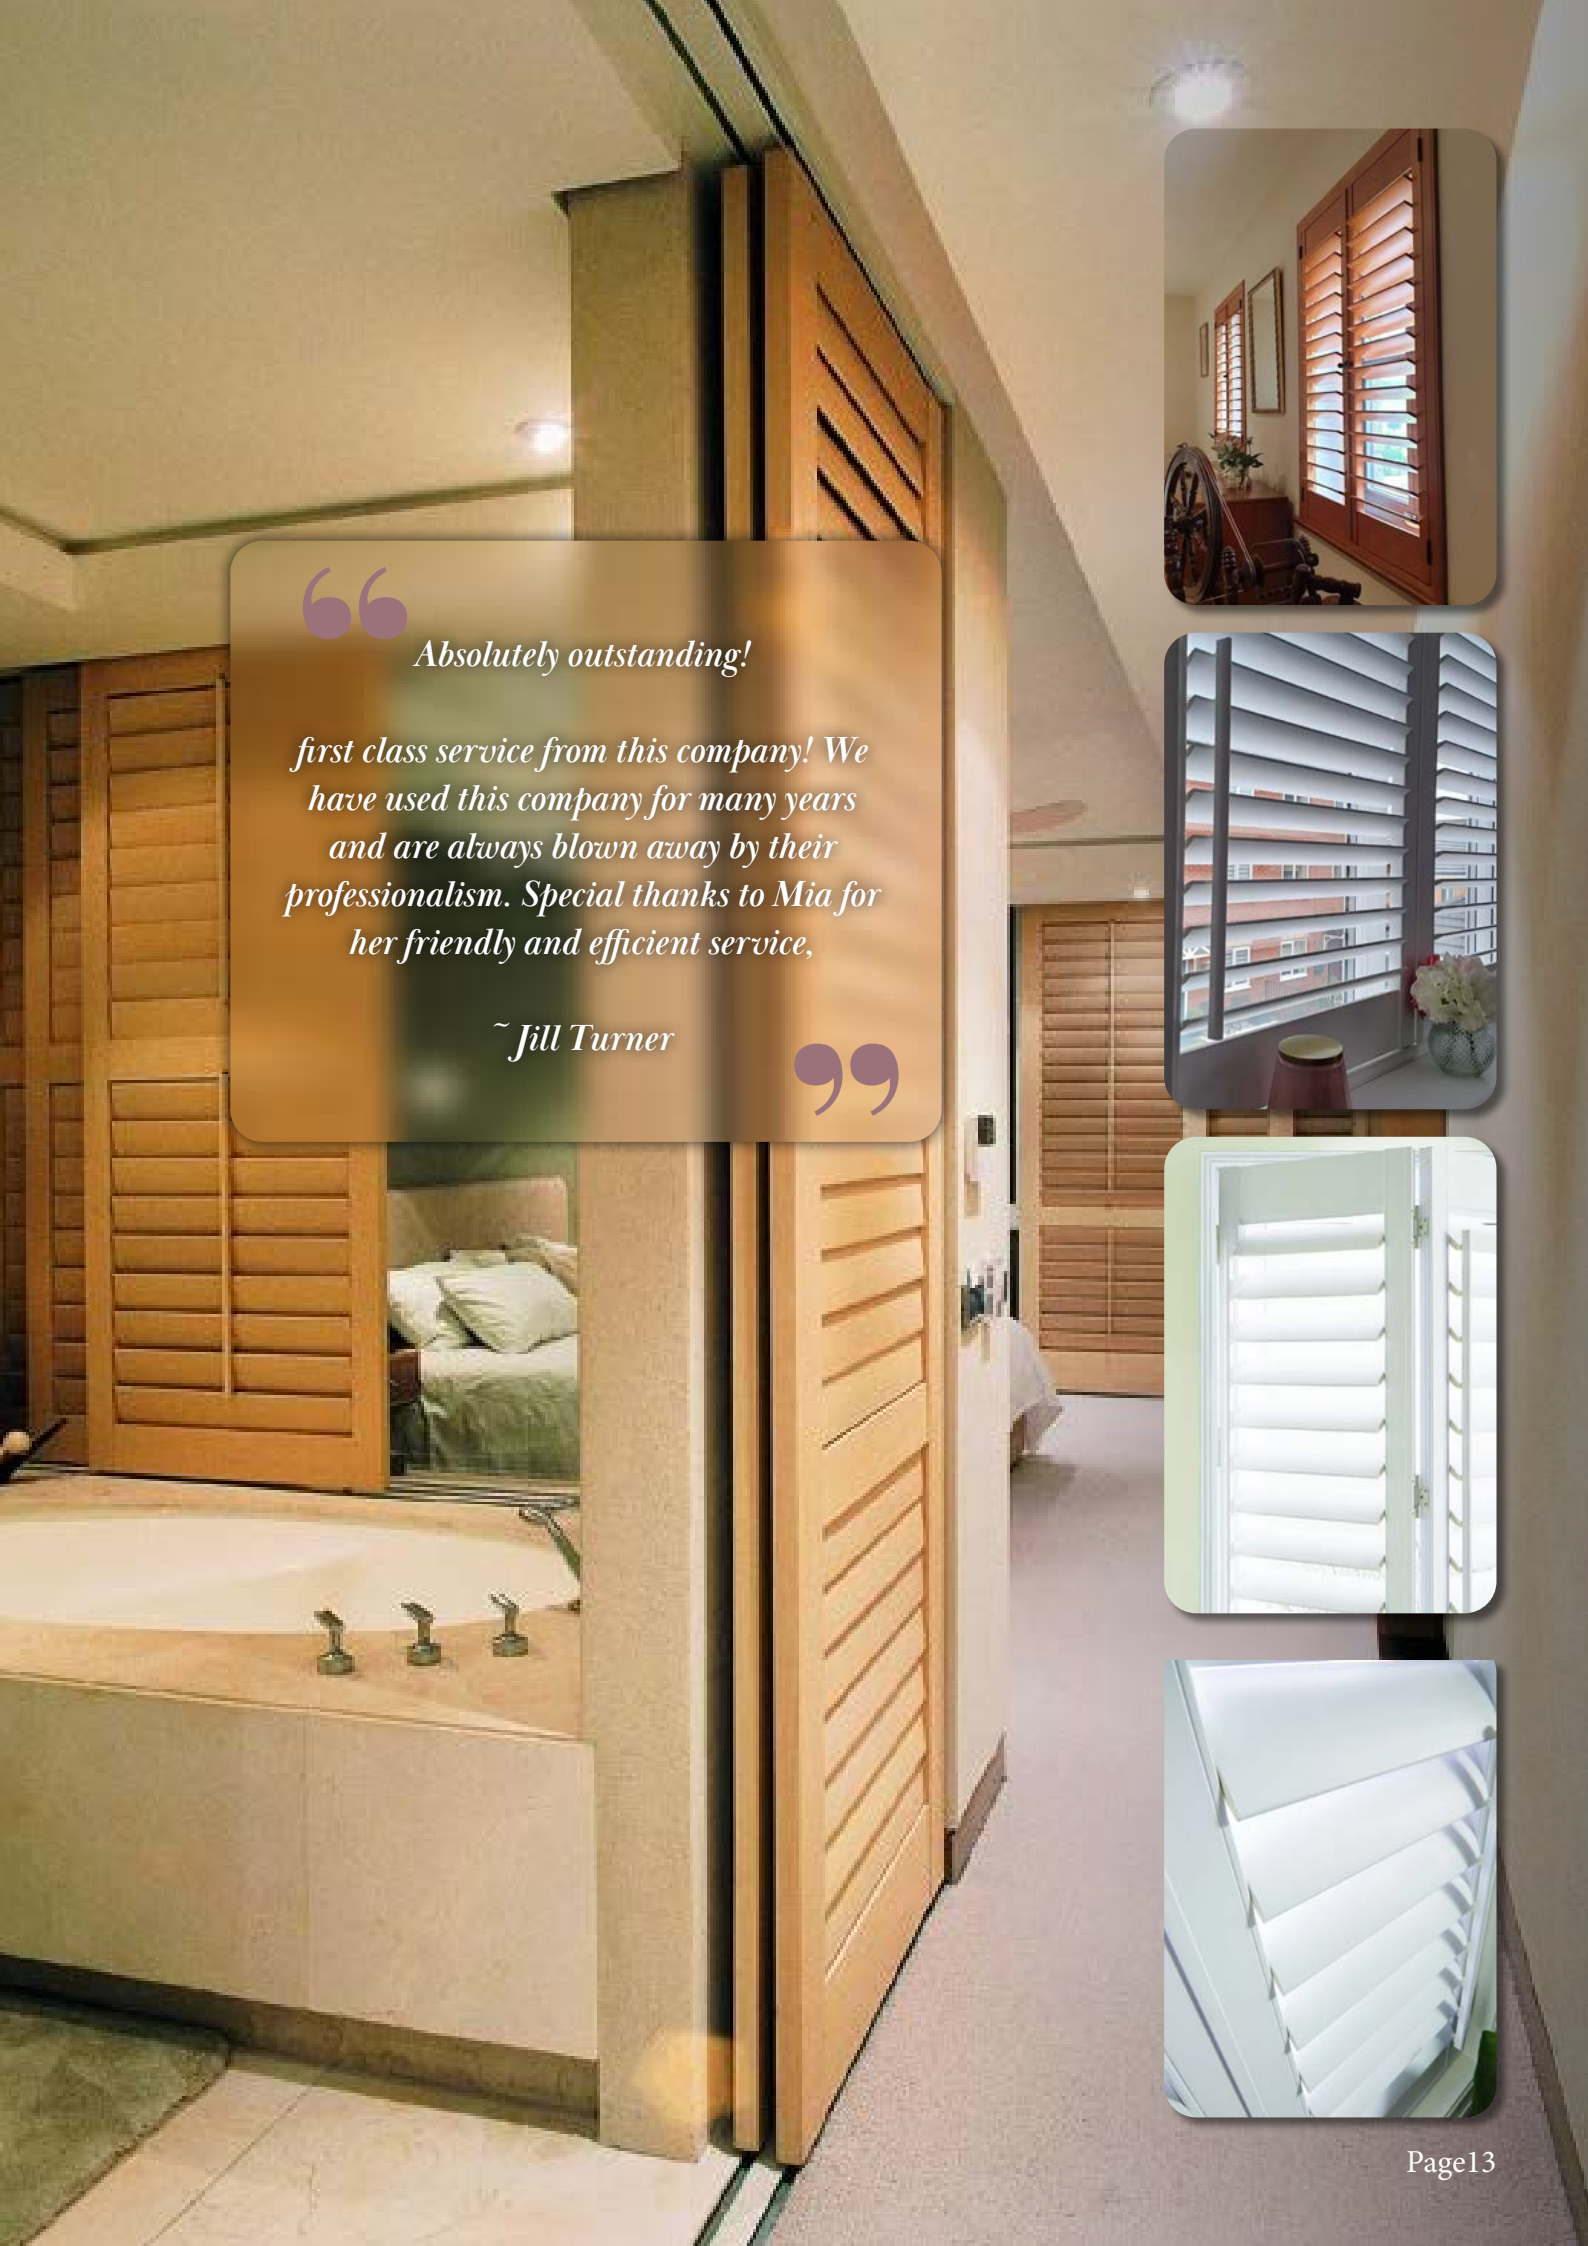

- Plantation Shutters:

Custom-crafted to navigate the exact angles of your windows. Choose from Full Height for a sophisticated sweep, or Tier-on-Tier for independent control of the top and bottom panels

Because they are a solid fixture, they also act as a highly effective thermal and acoustic barrier

Urban Shutters:

Achieve the exact same premium aesthetic in moisture-prone rooms. Manufactured from rigid, 100% waterproof uPVC, Urban Shutters are the flawless, long-lasting solution for luxury bathrooms and busy kitchens

“

Absolutely outstanding!

first class service from this company! We have used this company for many years and are always blown away by their professionalism. Special thanks to Mia for her friendly and efficient service,

~ Jill Turner

”

DYNAMIC LIGHT MANAGEMENT

– DAY & NIGHT BLINDS

Often called Zebra or Vision blinds, this is the definitive modern solution for homeowners who refuse to compromise between natural light and absolute privacy

- Precision Control:

Engineered with an innovative dual-layer system of alternating sheer and opaque stripes

Simply adjust the blind to align the sheer stripes for filtered daylight and a view outside, or offset them to instantly block the view from the street

- Perfectly Fitted:

For modern tilt-and-turn windows or patio doors, these can be integrated directly into our drill-free Perfect Fit frames, moving seamlessly with the glass

Battery Motorisation:

Bypass the manual chain entirely. Upgrade to a discreet, USB-rechargeable battery motor to operate your Day & Night blinds via a remote control or smart home app

SOFT ARCHITECTURE

– ROMAN BLINDS & PREMIUM DRAPERY

Sometimes, a room requires the softening touch of luxury textiles to feel properly finished. We bridge the gap between structural blinds and flowing elegance with meticulously crafted fabrics.

- Roman Blinds:

A compact, sophisticated alternative to curtains. When lowered, they provide a seamless, textured backdrop; when raised, they stack into crisp, architectural pleats. Available with thermal and total blackout linings for bedrooms.

- Motorised Curtain Tracks:

The ultimate everyday luxury. Heavy-duty electric tracks allow you to draw expansive, heavy curtains smoothly and silently at the touch of a button, or via voice command with Alexa and Google Home.

- Made-to-Measure Curtains:

From light-filtering voiles to heavy velvets, tailored with premium Pencil Pleat, Pinch Pleat, or contemporary Wave headings.

FANTASTIC!
Fantastic company from start to finish, great blinds well fitted would recommend thanks
...
~ Stuart Andrews

“ **VERY PROFESSIONAL**

Very professional company. It was a pleasure dealing with them from start to finish. No hesitation in recommending their products and service . . .

~ joanne meechem

”

“ PERFECT BLINDS

Perfect blinds uk were excellent from start to finish of my order, the fitter was polite and respectful of our home, I would highly recommend perfect blinds to family and friends. . .

~ David Brookes

”

THE DUAL-FUNCTION INNOVATION

– BLINDSCREEN® / FLYSCREEN

Modern living spaces often feature large bi-fold or sliding doors that merge the indoors with the outside, but leaving them open invites unwanted pests

Two Problems, One System:

BlindScreen® is an ingenious, sleekly framed solution. A thermal or blackout blind slides effortlessly from one side for complete light control, while a fine, durable insect mesh screen pulls from the opposite side. Summer Ready: Keep your expansive doors wide open on summer evenings, allowing fresh air to circulate while keeping flies and wasps out

Fully child-safe by design with no hanging cords

EXTERIOR ATMOSPHERES

– EXTERNAL SHADING & OUTDOOR LIVING

The atmosphere of your home doesn't stop at the glass. We provide advanced external solutions designed to extend your living space and manage solar heat before it ever enters your rooms

External ZIP Screens:

A highly technical mesh fabric locked securely into aluminium side channels on the exterior of your property

- They block intense sun and glare while maintaining your view of the garden

- They are also brilliant for enclosing pergolas to create a wind-protected outdoor room

Motorised Awnings:

Transform your patio into a shaded sanctuary. With a push of a button, extend a premium fabric canopy to provide instant relief from the midday sun

Automated Weather Control:

All our external screens and awnings can be heavily integrated with smart home weather sensors. If the sun gets too intense, they deploy automatically; if the wind picks up, they safely retract

EXPANSIVE GLAZING

– ALLUSION & VERTICAL BLINDS

Modern architecture heavily features expansive glass, such as large bi-fold or sliding patio doors. Dressing these requires a system that manages light efficiently without cluttering the clean lines of your space.

Allusion Blinds:

Often considered the ultimate luxury hybrid, Allusion blinds combine the precise light-filtering functionality of a vertical blind with the flowing, seamless elegance of sheer voile curtains.

- They provide a refined, architectural look that replaces outdated nets and bulky curtains

- For effortless control, the tilt action can be fully motorised

Modern Vertical Systems:

Functionality re-designed. We have evolved the traditional vertical blind into a sleek, modern fixture. Supplied in 89mm or 127mm louvres, we upgrade these systems with chainless bottom weights for a minimal, clean drape.

Perfect for maintaining privacy across wide expanses of glass while directing natural light exactly where you want it.

THE NATURAL ELEMENT

– VENETIAN ARCHITECTURE

The natural, structured beauty of slatted blinds provides a timeless architectural finish that seamlessly integrates into both period and modern properties.

Wooden Venetians:

Crafted from sustainable hardwoods, these substantial fixtures bring natural warmth and texture to your living spaces, ensuring a highly premium finish.

Fauxwood Venetians:

Achieve the exact same premium slatted look in demanding environments. Manufactured from durable, moisture-resistant PVC, Fauxwood is the perfect wipe-clean solution for luxury bathrooms and busy kitchens where real wood might warp.

Integration:

For tilt-and-turn windows or doors, our 25mm Venetian slats can be perfectly integrated into our drill-free Perfect Fit frames, sitting flush against the glass.

THE LAYERED APPROACH

– PREMIUM ROLLER BLINDS & CASSETTES

The true classic, elevated. We bypass standard, generic roller blinds by engineering layered, highly finished systems tailored to the exact requirements of your room

Free Hanging Roller Blinds:

If there's one blind that works in pretty much every room of the house, it's the free hanging roller blind. Clean, simple, and dead easy to use — it's been the go-to choice for UK homes for a long time, and it's easy to see why.

Double Roller Blinds:

Most windows only need one blind. But some rooms ask for a bit more. Maybe you want to let the morning light in gently without losing privacy. Maybe you need the room properly dark at night but bright and airy during the day. That's exactly what a double roller blind is built for.

Perfectly Fitted Roller Blinds

Most blinds sit in front of your window or hang inside the recess. The Perfectly Fitted Roller does something quite different — it clips directly onto the window frame and becomes part of it. The profile runs around the glass and sits flush with the window, so rather than looking like a blind has been added to the window, it looks like the blind was always meant to be there.

VERY PROFESSIONAL

Very professional experience from start to finish, The office contact and sales rep, we're very nice and informative! The actual guy who fitted them, worked in a very clean professional manner! Very polite and friendly! Quality of the product is exceptional Thank you perfect Blinds UK!

~ Kevin White

QUICK SERVICE

This company was recommended to me by my sister-in-law, my niece and my mum as they had all had blinds made and fitted by them. Really quick service and quick fitting ordered and paid for and fitted within over a week would highly recommend this company to Of the family and friends

~ Trina Hawksworth

“ GREAT SERVICE

Great service from start to finish. Lovely friendly staff that help with the choice of blind and fabric for the room and look that you wish to achieve. Good quality, great price . Delivered and fitted in less than 2 weeks.

~ Melanie Szoke

OVERHEAD SANCTUARIES

– VELUX & SKYLIGHT SHADING

Loft conversions and roof extensions rely on skylights to flood the space with natural daylight, but without proper shading, they can quickly overheat in summer and lose heat in winter.

Made to Measure Blinds for Skylight Attic Windows

Roof windows bring brilliant natural light into your home, but they can also bring glare, heat, and early morning wake-up calls. VELUX blinds and skylight blinds solve all of that. They fit snugly into your roof window frame, giving you control over light, privacy, and temperature without blocking the view when you do not need them.

At Perfect Blinds UK, we are an official VELUX dealer, and we manufacture all our skylight blinds in-house. We supply blinds specifically designed for genuine VELUX windows, as well as other leading skylight brands such as Fakro, Keylite, and Rooflite. Whatever roof window you have, we can provide a blind that fits it perfectly.

Skylight blinds are essential for loft bedrooms, home offices, and any room where roof windows let in more light or heat than you want. The right blind transforms an uncomfortable space into somewhere you actually want to be.

UNCOMPROMISING EXTERIORS

– EXTERNAL SHUTTERS

True calmness in the home requires peace of mind. External shutters are an architectural upgrade that provides exceptional security alongside highly effective environmental control.

Engineered Protection:

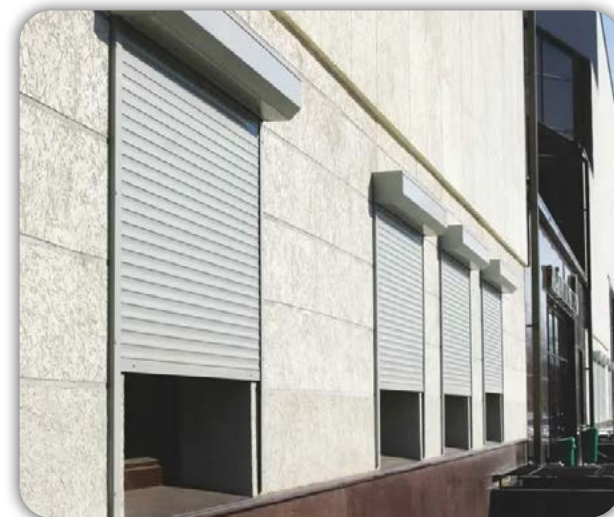

Manufactured from a lightweight, highly durable composite surrounded by a rigid aluminium shell, these shutters provide a formidable physical barrier for your home.

Effortless Automation:

These heavy-duty systems are fully motorised using premium Somfy or Torro motors. Control them via remote, or connect them to your smart home hub to automatically secure your house at dusk, ensuring your family feels safe and protected. Available in nine architectural colours to seamlessly match your exterior brickwork and window frames.

Acoustic & Thermal Control:

When fully closed, the insulated profiles block out street noise, completely eliminate light ingress, and provide unparalleled thermal insulation against harsh weather.

Modern Home Blinds

The definitive guide to modern window architecture, smart automation, and properly finished interiors.
